

# Scientific Method Lab - Chapter 1

## The Nature of Science

Pg. NOS 11

What strategies are involved in solving a science problem?

**Question 1: Determine the problem. State what you want to do.**

**Question 2: State a prediction you want to test.**

**Question 3: Test your hypothesis. How will you use the computer model to test your hypothesis? What steps will you follow? What data will you record? Be specific about which of the variables you will adjust and when.**

**Question 4: Draw a conclusion. Did the results of your experiment support your hypothesis? Why or why not?**
